

Week Four: January 29, 2011 – February 4, 2011

Wes and Naz work to machine parts.

This week has flown by! With all of the additional snow days, Team Driven students and mentors have been working really hard to have the shop and robot ready for this weekend's upcoming Open House. The team has viciously working on making and placing parts on the robot.

Louie working the Bridgeport.

Tori, Pete, and Dakota work on robot.

Along with the build team, the PR team has been making buttons, posters, and various other decorations for the Open house.

Also, the CAD team has kept up with the build team. They have CADed everything on the robot up to this point.

In more exciting news, we hung a tube onto a peg this week! It was very exciting and the whole team was ecstatic by this major achievement.

Dakota and Mike work on CAD for the robot.

Amazing cookies made by Linda Pickett!! ☺

Also the website team has been working on adding all of the student bios onto the website. To view the student bios, go to the team webpage and under Community click student bios. We added a new addition to the home page as well. Now featured on the home page is Team Driven's tweets! These twitter tweets will be updated regularly and many times at competition so make sure to keep an eye out for that!

Upcoming

This Sunday, February 6th, Team Driven will be hosting an Open House along with the Broncobots and Team Titanium. All three Lee's Summit robotics teams will be opening their build shops to the public from 1:00 to 4:00 pm. We can't wait to see you all there!!

Countdowns

Days until the robot is bagged:
17 days
Days until the Kansas City Regional:
33 days
Days until the North Star Regional:
53 days
