

Week Two: January 14, 2011 – January 20, 2011

This week has been another busy but fun week. The Build team should be driving by tonight! They have been welding polycord for the elevator belts. They have the elevator mounted, the electronic board is on, and pneumatics are on their way!

The Communications team is continuously working on all their various projects. The Website team should have the website up and running within the upcoming week! This week as an outreach program, we helped out FRC team 1825, The Metro Home School Robotics.

All of the fundraising team's work has been very beneficial. They have started selling the *FIRST* light bulbs, Hy-Vee books, and has even started planning a car smash! The CAD team has been

working on 3 different models of the ball lifting conveyor. Chairman's team is on their second set of edits and their script for the video is complete. They will begin filming soon! The animation team is still in the brainstorm process. They have made a lot of progress and are very excited to get working! Thanks so much for bringing in all the cans! Please keep up the good work! Team Driven was really productive this week and can't wait for their next week of the season!
