

# The Odometer

A Weekly Team Driven Update

Week One: January 5, 2013 – January 19, 2013

Team Driven has been busy at work this week. We have been working on prototyping our robot. All the subteams are putting a lot of hours to get their work done. Each subteam is putting in effort in order to achieve the team goals for this year.

The CAD team has been working on the climbing apparatus and the shooting mechanism.

The build team has been working on prototypes to test the concepts the the team has come up with. Luckily, all of their concepts have worked. The build team also has been building the full size pyramid in order to test the climbing apparatus .

Another team that has hard at work this week is the programming team. The programming team has been working hard to program the framework for the program code. They spent most of the week updating the software.

The website team got a new mentor this year. They have had meetings about what improvements they hope to make to the website this year.

The communications team is starting to revamp all of the old information. They are working on a big project that the hope will be a huge success.

The animation team is in the brainstrom process. They are excited to start working.

Last Saturday, we had an alianance dinner. It was a huge success. Our team had a lot of fun getting to socialize with the Broncobots and Team Titanium.

Team Driven cannot wait for the upcoming week and is thrilled to continue building the robot!
